

Assessment overview

Target	https://www.rehmantravel.com/
Generated	2026-10-02 14:20 UTC
Overall risk	MEDIUM
Findings listed	7

Findings summary

CRITICAL 0	HIGH 0	MEDIUM 2	LOW 4	INFO 1
-----------------------------	-------------------------	---------------------------	------------------------	-------------------------

Detailed findings

Findings are observations from limited, low-impact checks. Validate each item in context before treating it as an exploitable vulnerability or applying a configuration change.

Severity	Finding	Evidence observed	Recommended remediation
medium	Missing HSTS header	HTTP response does not include strict-transport-security.	Helps enforce HTTPS after a browser has learned the policy. Configure the header after testing application compatibility.
medium	Missing Content Security Policy header	HTTP response does not include content-security-policy.	Helps restrict browser resource loading. Configure the header after testing application compatibility.
low	Missing Content type protection header	HTTP response does not include x-content-type-options.	Helps prevent MIME-type sniffing. Configure the header after testing application compatibility.
low	Missing Referrer policy header	HTTP response does not include referrer-policy.	Controls referrer information sent by browsers. Configure the header after testing application compatibility.
low	Missing Permissions policy header	HTTP response does not include permissions-policy.	Restricts access to selected browser features. Configure the header after testing application compatibility.
low	Cookie attributes missing: rehman_group_of_companies_islamabad_pakistan_session	Secure	Set appropriate Secure, HttpOnly, and SameSite attributes based on cookie purpose.
info	HTTP endpoint responded	Final URL: https://www.rehmantravel.com/	Review the other findings and validate them against the application's requirements.

limitations	This is a low-impact surface assessment, not a full penetration test., No authentication bypass, injection payloads, brute force, or exploit attempts are performed., A missing header is a configuration observation, not proof of a vulnerability., DNS results can change between validation and connection; use only authorized targets.

Recommendations and responsible use

Review every finding manually, validate evidence, and prioritize remediation based on business impact and exposure. A scan is a point-in-time assessment and cannot guarantee that a website is free of vulnerabilities. Only assess systems for which you have explicit authorization.
